

Manage a package

```
$ vim defaults/main.yml
```

```
---
```

```
# defaults file
```

```
desired_state: present
```

```
package: httpd
```

```
$ vim vars/absent.yml
```

```
---
```

```
# Variable values for desired_state: absent
```

```
package_clause: "not in"
```

```
service_state: stopped
```

```
systemd_state: stopped
```

```
systemd_enabled: false
```

```
$ vim vars/present.yml
```

```
---
```

```
# Variable values for desired_state: present
```

```
package_clause: "in"
```

```
service_state: running
```

```
systemd_state: started
```

```
systemd_enabled: true
```

Handlers

```
$ vim handlers/main.yml
---
# handlers file for web
- name: Control service
  ansible.builtin.systemd:
    name: "{{ service }}"
    state: "{{ systemd_state }}"
    enabled: "{{ systemd_enabled }}"
    daemon_reload: true
```
